AUTHORS GUIDELINES

Marine & Fishery Sciences (MAFIS) is an Open Access charge-free journal edited by the Instituto Nacional de Investigación y Desarrollo Pesquero (INIDEP) that publishes peer-reviewed articles of original investigations not published elsewhere except as a brief abstract in a scientific meeting or symposium. It is published four times a year (January, April, July and October) aiming all work and studies on applied or scientific research in marine, coastal and brackish waters, such as Fisheries, Aquaculture, Biology, Ecology, Biodiversity, Oceanography, Coastal Management, Ecosystems, as well as their social-related aspects that directly or indirectly affect to human populations, including conservation and environmental impact at a regional level. Freshwater content is restricted to Fisheries and Aquaculture Production only. Studies in freshwater (such as biology, growth, nutrition, health, etc.) that do not integrate the two previously mentioned will not be considered. Highly local studies lacking international scope will not be considered.

The quality of the journal is guaranteed by the editorial and advisory boards, consisting of leading researchers in the field of marine sciences. Contributions should be written in Spanish or English in the following categories:

TYPES OF PAPER

Original Research Papers are generally based upon hypothesis-driven research providing new information to the knowledge base, not just to confirm previously published work. Descriptive studies presenting novel information or observations and/or scholarly insight that contributes to advancement of the state of information on a given scientific topic are also allowed.

Review Articles are welcome and should cover either narrow disciplinary subjects or broad issues requiring interdisciplinary discussion. They should contain not only an up-to-date review of scientific literature but also substantial scholarly interpretation of the quality of existing data, the status of knowledge, and the research required to advance knowledge of the subject are essential. Reviews consisting solely of a summary of published data without interpretation leading to new insights or recommendations for new research directions will be returned to the author without review. Structured reviews and meta-analyses must conform to the Preferred Reporting Items for Systematic reviews and Meta-Analyses PRISMA guidelines (see also https://doi.org/10.1016/j.mex.2019.100777 and references therein).

Notes should differ from full papers on the basis of scope or completeness, rather than quality of research. They may report significant new results which represent a major breakthrough or new discovery arising from problems with narrow, well-defined limits, or important findings that should therefore be published quickly. They should not be used for preliminary results. Papers must contain sufficient data to establish that the research has achieved reliable and significant results. Their text should neither exceed 1500 words (approximately six pages of typescript) excluding keywords, tables and references, nor be divided up into conventional sections.

Technical Papers should present new methods, devices or procedures for either research methodology or analysis-related techniques. It may also describe the state of a technical or scientific research problem and provides a new approach.

Marine Insights offers a space for presenting research findings in marine and fisheries sciences that are relevant to academia and important for the oceans and their resources. Unlike a traditional Review, this section adopts a more innovative approach, aiming to appeal to a broad audience, including policymakers and the general public. Therefore, it is important to ensure that they are written in an accessible, semi-journalistic style that captures the interest of both specialized and non-specialized readers. Manuscripts are peer-reviewed.

Points of View is a public forum for short comments or opinions on marine affairs and policies, fisheries management, and administration. Authors may share their personal opinions on these topics respectfully and based on facts, current issues, and legislations. Comments should be written in a clear and understandable manner, avoiding the use of technical terms whenever possible. Although opinions are encouraged, they should be founded on sound reasoning developed from peer-reviewed literature. Unfounded opinions or partisan political themes will not be accepted. This section is peer-reviewed at the editor´s discretion.

GENERAL CONSIDERATIONS

Declaration of interest

All authors must disclose any financial and personal relationships with other people or organizations that may inappropriately influence (bias) their work. Grants or other funds that allow the conduct of the research must be declared. Please use the Acknowledgments section to do that.

Submission declaration

Submission of an article implies that the described work has not been previously published (except in the form of an abstract, a published conference or academic thesis), that it is not under consideration for publication elsewhere, that its publication is approved by all authors and tacitly or explicitly by the responsible authorities where the work was carried out, and that, if accepted, will not be published elsewhere in the same form or in any other language without the written consent of the rights holder.

Audience

The journal is aimed at researchers, professionals, and students from different branches of marine and fisheries sciences, such as marine biologists, fisheries scientists, ecologists, oceanographers, and fish farmers.

Abstracting and Indexing

SCOPUS; DOI Crossref; LATINDEX Cat. 2.0; DOAJ; AMelica.org; Aquatic Sciences and Fisheries Abstracts (ASFA); Agrindex; Zoological Records (BIOSIS Database); AquaDocs; CORE; BASE, MIAR.

Open Access

This journal offers authors a Diamond Open Access policy. Users may read, download, copy, distribute, print, search, or link to the full texts of articles, or use them for any other lawful purpose, without prior permission from the publisher or author, always citing the source. This is in accordance with the Budapest Open Access Initiative (BOAI) definition of open access.

Peer Review

This journal operates using a "double blind" review process. All contributions are initially evaluated by the Editor to determine if they are suitable for the journal. Articles that are considered suitable are normally sent to two independent expert reviewers to assess the scientific quality of the document. The Editor is responsible for the final decision on the acceptance or rejection of articles. The publisher's decision is final.

Publication Frequency

CAP (*Continuous Article Publishing*): Each article is published immediately after peer-review and final approval and incorporated to an issue.

Copyright

Authors of articles published in Marine and Fishery Sciences retain copyright on their articles, except for any third-party images and other materials added by Marine and Fishery Sciences, which are subject to copyright of their respective owners. Authors are therefore free to disseminate and re-publish their articles, subject to any requirements of third-party copyright owners and subject to the original publication being fully cited. Marine and Fishery Sciences editorial policy allows authors to deposit the postprint (final peer-reviewed version) in other repositories without any delay (Sherpa / Romeo blue color). Visitors may also download and forward articles subject to the citation requirements. The ability to copy, download, forward or otherwise distribute any materials is always subject to any copyright notice displayed. Copyright notices must be displayed prominently and may not be obliterated, deleted or hidden, totally or partially.

ETHICAL RESEARCH CONDUCT POLICIES

Research ethics and legal aspects

All research submitted to MAFIS for consideration must have followed the MIFES guidelines on study ethics. In accordance with COPE guidelines, MAFIS reserves the right to reject any manuscript that editors consider does not uphold high ethical standards, even if authors have obtained ethical approval or if ethical approval is not necessary. This journal encourages authors to follow ARRIVE guidelines for designing, analyzing, and reporting of scientific research.

The journal publishes only original work that makes a clear and strong contribution of new information in its field. When authors submit a manuscript they legally imply that they followed all pertinent legislation and ethical principles (including informed consent and proper treatment of nature according to UNESCO Recommendation on Science and Scientific Researchers, the Committee on Publication Ethics (COPE) and Helsinki Ethical Norms; that all coauthors

participated in the main aspects of research and agree to publication; and that the study is original, scientifically valid, has not been published before, and was not sent simultaneously to another journal. Board and staff members can publish in the journal but are excluded from all decisions regarding their manuscripts.

Authors, reviewers, board members and staff must report conflicts of interest as soon as they arise. Any cases of error, citation manipulation, piracy, plagiarism, duplicate submission, republication, fabrication or falsification of data, and financial conflict, must be informed to the Editorial Committee, which will investigate them even if the report is from anonymous sources. Articles found in fault can be rejected, retracted or be added errata.

The COPE guidelines on policies on retractions, corrections, and publishing malpractices do apply to a broader range of post-publication matters, beyond just fundamental errors or fraud. These mechanisms are intended to protect the integrity of the scholarly record and ensure transparency. The following areas are covered under the umbrella of post-publication amendments:

- Expressions of Concern (EEoC): Used when there is inconclusive evidence of research misconduct, ongoing investigations, or potential problems that are not yet finalized.
- Authorship Disputes: Changes to the author list, including adding, removing, or changing the order of authors, require formal post-publication amendments.
- Conflicts of Interest: Failure to disclose significant financial or personal conflicts that could influence the study's interpretation.
- Ethical Violations: Studies that did not receive ethical approval or used unauthorized human/animal data.
- Redundant/Duplicate Publication: Publication of the same data in multiple journals without cross-referencing.
- Data/Image Manipulation: Even if it doesn't entirely invalidate the paper, inappropriate manipulation warrants a correction or retraction.
- Legal/Security Concerns: Issues regarding confidentiality or potential hazards.
- Author Name Changes: Formal changes to author names, including those based on gender identity, are now handled sensitively post-publication.

Studies in animals

All animal experiments should comply with ARRIVE guidelines and should be carried out in accordance with institutional, national and international guidelines concerning the use of animals in research abd/or the sampling of endangered species. Authors should clearly indicate in the manuscript that such guidelines have been followed. Authors are expected to provide details on the housing, husbandry and pain management of animals in their manuscript, along with steps taken to minimize suffering.

When doing research on free-living animals, scientists should make every effort to reduce the influence of their work on populations and ecosystems under investigation. Every field of study needs the proper licenses and permits, which should be detailed in the manuscript´s Material and Methods section.

Authorship

It is very important to make clear that people who have made substantial intellectual contributions to a paper, are given credit as authors. And, that people who are recognized as authors understand their responsibility and accountability for what is being published. Criteria typically require meeting four standards: substantial contributions to conception/design or data acquisition/analysis; drafting or critically revising the work; final approval of the version to be published; and agreement to be accountable for all aspects of the work.

In addition to being accountable for the parts of the work done, an author should be able to identify which co-authors are responsible for specific other parts of the work. In addition, authors should have confidence in the integrity of the contributions of their co-authors.

The corresponding author is the principal point of contact with the journal throughout the paper submission, peer-review, and publication process. The corresponding author is typically responsible for ensuring that all of the journal's administrative requirements, such as authorship details, ethics committee approval, and disclosures of relationships and activities, are completed and reported correctly, though these duties may be delegated to one or more co-authors. The corresponding author should be available during the submission and peer-review process to respond to editorial queries in a timely manner, as well as after publication to respond to work critiques and cooperate with any requests from the journal for data or additional information if questions about the paper arise after publication.

This journal encourages collaboration with colleagues in the locations where the research is conducted and expect their inclusion as co-authors when they fulfil all authorship criteria described above. Contributors who do not meet all criteria for authorship should be listed in the Acknowledgements section. The authors should decide the order of authorship together.

Machine learning and artificial intelligence (AI) tools do not meet the authorship criteria because they cannot be held responsible for the accuracy, originality, or integrity of their results.

PAPER FORMAT

Use of word processing software

It is important that the file be saved in a format compatible with Microsoft Word processor. The texts should be in single-column forma line-numbered. Keep the layout of the text as simple as possible. When preparing tables, if you are using a table grid, use only one grid for each individual table and not a grid for each row. If no grid is used, use tabs, not spaces, to align columns. Source files of figures, tables and text graphics may be required for final formatting.

Structure

Manuscript should be arranged in the following order: **Title page** should include a Running Head, Title, Author(s), Affiliation, Address(es), e-mail from the corresponding author; **Abstract page** with an Abstract and Key words; **Main text** should include an Introduction, Materials and Methods, Results, Discussion, Acknowledgements, References, Figure Legends, Tables, Figures and Appendices. If work is written in Spanish, please provide key words in English also.

Title (bold font) should be no more than 20 words with no authorities associated with the species. A **running head** of not more than 50 characters should be suggested.

Authors addresses and **affiliations** should follow the title. Use superscript numbers to indicate different addresses. Please include an e-mail address and telephone for the corresponding author. This will appear on the title page of each article.

Author contributions – CredIT taxonomy. For transparency, we encourage authors to submit an author statement file outlining their individual contributions to the paper using the relevant CRediT roles: Conceptualization; Data curation; Formal analysis; Funding acquisition; Investigation; Methodology; Project administration; Resources; Software; Supervision; Validation; Visualization; Roles/Writing - original draft; Writing - review & editing. Authorship statements should be formatted with the names of authors first and CRediT role(s) following Table 1 of https://onlinelibrary.wiley.com/doi/full/10.1002/leap.1210.

Abstract should be a concise outline of the scope, main results and conclusion(s) of the paper without discussion or authorities associated with species not exceeding 250 words. Species name(s) will be in italics. Please provide up to six **key words**. Papers written in Spanish should provide an English abstract also. Please follow the Aquatic Science & Fisheries Thesaurus (FAO, Rome, www.fao.org/3/a-k5032e.pdf) for guidance.

Keywords: Up to **five** keywords need to be added after the Abstract. Keywords must be separated by commas. Do not include names of countries, states/provinces, seasons, abbreviations, and general terms such as "salinity". Keywords should be specific to the article and common within the subject discipline. Avoid repetition of words already appearing in the title.

Headings:

INTRODUCTION

MATERIALS AND METHODS

Chemical analysis / Statistics / etc. (2nd heading, lower case, bold, left justified)

Hydroacustics samplings (3th heading, lower case italics, left justified)

Artificial Intelligence Tools (AI). The use of such tools, specifying which tool and prompt were used for these purposes, must be declared in the Materials and Methods section. Authors bear full responsibility for all content in their manuscript, including sections generated with AI tools (if any). For directives on AI use author should refer to AI Statement for MAFIS and the Committee on Publications Ethics (COPE) statement.

RESULTS

DISCUSSION

Subheadings, if used, should follow the instructions under MATERIALS AND METHODS.

ACKNOWLEDGMENTS

You may acknowledge individuals or organizations that provided advice, assistance or financial support. Please provide details of the sources of financial support of all authors, including grant numbers.

Taxonomic submissions should indicate Order, Suborder, Family, Genus and Species with author and year. Type of material (holotype and paratype) should be described including locations sampling and collections.

Submission

Original manuscript for consideration including text, tables and figures should be uploaded to MAFIS upon request of registration. If any problem uploading submission, please contact to Editorial Committee (c-editor@inidep.edu.ar / ojs@inidep.edu.ar). All correspondence, including notification of the Editor's decision and requests for revision, is sent by e-mail.

Please suggest the names, institutions and e-mail addresses of up to four potential reviewers from different countries in the research field of the paper.

The work that do not adapt to the standards set by the Editorial Committee will not be considered. Once the editorial requirements are met, they will be sent to two specialists, who will operate as anonymous reviewers (double blind). If necessary, a third evaluator will be consulted. After making the corrections suggested by the evaluators, the authors will upload the final version. The authors will receive a proof of printing, which will be corrected and returned within a week of receipt. Otherwise, the Editorial Committee will make the necessary corrections, declining responsibility for errors that may go unnoticed, or postpone the publication of the work. Correction of the proof must be indicated by using the word processor´s option or by a different color or indicating the line number.

Scientific names must be italicized (not underlined) and their first mention after the Abstract must be followed by the Authority and date in parenthesis when appropriate.

Papers must be original contributions written in Spanish or English. The text will be double-spaced on A4 sheets of white paper, Times New Roman typography, body 11 points, with numbered lines are encouraged.

For the use of abbreviations and units the Typographic Code adopted by the FAO and the International System of Units (SI) must be followed. Therefore, the units will always be written without a dot and will remain invariable in the plural. For example, use m s^{-1} instead of m / s, kg h^{-1} instead of kg / h, g m^2 s^{-1} instead of g m^2 / s, etc. Some units are not part of the International System but are accepted for use with it and therefore have an agreed international symbol. Such is the case of the metric ton (t), liter (l), day (d), hour (h), minute (min), second (s), etc. The nautical mile is a widely used unit but does not belong to the SI, and also lacks an international symbol. Therefore, in the Spanish texts the symbol mn may be used, while in nautical nautical mile it shall not be abbreviated. This rule is intended to avoid confusion, since nm is the symbol corresponding to the SI unit nanometer (10-9 m). The International System of Units (SU) should be consulted.

When notations are used, they should be clearly defined the first time they are used in the text. Examples: total length (TL), El Niño Southern Oscillation (ENSO). Capture per unit of effort CPUE will be noted in both the plural and singular texts in Spanish, while in English the singular will be written CPUE and the plural CPUEs.

Capital letters will also be accented following the correct rules of spelling in Spanish. The decimal place will be indicated with "comma" or "period" according to the language of the work, be it Spanish or English, respectively.

Footnotes should be avoided. If necessary, they should be listed correlatively.

Tables, figures and photographs

Tables and figures will be presented individually in Times New Roman typography, on a separate sheet with their respective epigraphs. If manuscript is in Spanish, a complete and sufficiently clear Abstract in English will be required.

Arabic numerals will be used for the numbering. Do not include names such as box, diagram, map, sheet, photograph, etc. References to tables and / or figures in the text will be capitalized, e.g. "... as indicated in Figure 1", "... in Table 2 ...". In the epigraphs and in the text, "Table" and "Figure" will be written without abbreviating. The symbols, abbreviations and names of the variables used in the tables and figures must be clearly stated.

Figures can occupy the entire width of the print sheet that will be 16.0 x 21.0 cm, or just one column of it (7 cm wide), according to the criteria of the Editorial Committee. Numbers and letters included in them must be of a size such that with the maximum reduction they reach between 2 and 4 mm high. In addition, black surfaces should be avoided. If the graphics were made with a computer, their printing will be done with a laser printer (high definition). When photographs are included, they should have good contrast and high resolution.

REFERENCES

The Council of Scientific Editors (CSE) citation style should be followed: *Name-Year (N-Y)* system (*Scientific style and format: the CSE manual for authors, editors, and publishers. 2014. 8th ed. Chicago (IL): University of Chicago Press*).

How to install CSE style in Mendeley?

How to install CSE style in Endnote?

General rules

- Only references that have been cited in the body of the paper should be included.
- Organization: In the N-Y system, entries are listed in alphabetical order by the name of the first author's last name (or, if there is no known author, by organization name or by the title of the work). The year is placed after the last author's name, followed by a period.
- *Authors' names*: List authors' last names, followed by initials for first and middle names. Do not use periods or spaces between the initials. Do not use a comma between the last

name and the initials, e.g., Smith BL. Include all authors' names if a work has up to ten authors; for a work with eleven or more authors, list the first ten names followed by a comma and "et al.". For works with two authors, do not use "and" or "&" to separate the authors' names. Separate successive author names from each other by a comma and a space, e.g. Author AA, Author BB. Capitalize surnames and enter spaces within surnames as they appear in the document being cited, e.g. Van Der Horn or van der Horn; De Wolf or de Wolf or DeWolf. Place family designations of rank after the initials, without punctuation, e.g. Author AA Jr.

- Multiple citations by same author: If you are citing more than one item by the same author(s), list works in chronological order (oldest first).
- Organization/group as author: Put the abbreviation of the group name in square brackets so you can use it in your in-text citation. The abbreviation should appear as the first part of the citation in the end reference, e.g., [CLA] Canadian Lung Association.
- Formatting titles: Do not italicize or underline the titles of books or journals.
- **Titles of books and articles**: Only the first letter of the title's first word and any proper nouns should be capitalized. Do not enclose article titles in quotation marks.
- **Titles of journals**: Abbreviate the titles of any journals that consist of more than one word. Omit articles, conjunctions, and prepositions (e.g., the, and, of). Do not use apostrophes. Capitalize all the words or abbreviated words in the title. For example: Science - Sci Am – Mar Bio - Aquaculture.

To find abbreviations:

- CalTech ISI Journal Title Abbreviations: http://library.caltech.edu/reference/abbreviations/
- NLM Catalog: Journals referenced in the NCBI Databases http://www.ncbi.nlm.nih.gov/nlmcatalog/journals
- Or ask for help from the TRU Library: http://www.tru.ca/library/askaway.html

To find scientific words and keywords:

- FAO Agrovoc: https://agrovoc.fao.org/skosmosAsfa/asfa/es/?clang=en

Journal titles are capitalized and abbreviated according to ISO 4. See http://www.issn.org/services/online-services/access-to-the-ltwa/. Journal subtitles are not considered as part of the title, so are not included in the abbreviation. Journal title abbreviations do not include full points, except at the end of the title. Do not abbreviate journal titles consisting of a single word.

The issue number can be omitted if the journal is paginated consecutively through the volume, but it is not incorrect to include it. Enclose issue information in parentheses. Link multiple volume or issue numbers with an in dash.

Page ranges: Include page ranges for articles in journals/magazines/newspapers and for chapters in books. When an article appears on discontinuous pages, list all pages or page ranges, separated by commas, e.g., 145-149, 162-174. For chapters in books, use the abbreviation "p." before the numbers (p. 63-90).

No date of publication: Use the abbreviation [date unknown]. Exception: When citing electronic publications (e.g., websites), use the dates of update/revision (or both) instead.

More than one city of publication: Use the first one listed.

Citations & Examples

- Be sure that every in-text citation has a corresponding entry in the reference list. (Exception: personal communications)
- In-text citations (also known as parenthetical references) include the author's last name and year of the reference without a comma, e.g., (Ramirez 2011).
- If there is no author, include the first word(s) of the title (enough to identify the source) followed by an ellipsis (...), e.g., (Biological research … 2007)
- For 2 authors, list both last names in the in-text citation separated by “and” (NOT an ampersand “&”), e.g., (Gatty and Gaynor 2008)
- For more than 2 authors, list the first author’s last name followed by “et al.” and the year, e.g., (Cousseau et al. 2001)
- For different authors with the same last name, provide initials or enough other names to distinguish between them, e.g., (Smith BL 1999; Smith TD 2002).
- Examples: 'as demonstrated (Allan, 2000a, 2000b, 1999; Allan and Jones, 1999).... Or, as demonstrated (Jones, 1999; Allan, 2000)... Kramer et al. (2010) have recently shown ...'
- References should be arranged first alphabetically and then further sorted chronologically if necessary.
- More than one reference from the same author(s) in the same year must be identified by the letters 'a', 'b', 'c', etc., placed after the year of publication.

- ***Journal Article, 1 Author***

Reference List:

Boccanfuso J. 2018. Reduced spawning activity in the red porgy (*Pagrus pagrus*) is related to light intensity. Mar Sci. 41(2): 379-87.

In-Text Citation:

(Boccanfuso 2018)

Distinguish multiple works by the same author published in different years by placing the years after the author name in chronological sequence, separated by a comma and a space.

In-Text Citation:

Chen’s studies (1990, 1992, 1994) were examined closely …

(Smith 1970, 1975).

When multiple works from the same author in the same year, put a, b, c, etc. after the year. The sequence is preferably determined by the sequence of publication, but if this cannot be determined, order alphabetically by article title:

In-Text Citation:

(Chen 2011a, 2011b; Chen et al. 2016a, 2016b).

If the authors of two works published in the same year have the same surname, include their initials in the in-text reference and separate the two in- text references by a semicolon and a space:

In-Text Citation:

(Dawson J 1986; Dawson M 1986).

- ***Journal Article, 2 to 10 authors***

Reference List:

Bakun A, Parrish RH. 1991. Comparative studies of coastal pelagic fish reproductive habitats: the anchovy (*Engraulis anchoita*) of the Southwestern Atlantic. ICES J Mar Sci. 48 (2): 343-361.

Brown DR, Leonarduzzi E, Machinandiarena L. 2004. Age, growth and mortality of hake larvae (*Merluccius hubbsi*) in the north Patagonian shelf. Sci Mar. 68: 273-283.

In-text Citation:

Smith and Jones (2016)

(Bakun and Parrish 1991)

(Brown et al. 2004)

If both authors have the same surname, include their initials in the in-text reference:

(Smith TL and Smith UV 1990).

Multiple references:

When several in-text references occur at the same point, give them in chronological order from earliest to latest, separated by semicolons. Sequence by month those published in the same year or, if this information is not available, alphabetically by author names:

In-text Citation:

(Dawson and Briggs 1974; Dawson and Jones 1974; Smith AL 1978; Smith GT 1978; Smith et al. 1978; Tyndall et al. 1978; Zymgomoski 1978; Brown 1980)

If the first author's names and the years of publication are identical for several references, cite the surname of the first author and as many co-authors as necessary to distinguish the references, followed by et al. Include just enough names to eliminate ambiguity. For example:

In-text Citation:

(Martinez, Fuentes, et al. 1990) or (Martinez, Fuentes, Ortiz, et al. 1990), depending on what other Martinez et al. 1990 references are cited.

- ***Journal Article, More Than 10 authors***

Reference order

At the end of a document, list the references to sources that have been cited within the text, including those found in tables and figures, under the heading References.

Place references in alphabetical order by author. Alphabetical sequence is determined by the first author's surname (family name) and then, if necessary, by letter-by-letter alphabetical sequencing determined by the initials of the first author and the beginning letters of any subsequent authors' surnames.

Order references by the same author(s) by year in ascending order.

If there are several items with the same first author, alone and/or with co-authors, present items by a single author before items with co-authors, regardless of title. In such a grouping, give the multi-author publications in alphabetical order by the second author's surname, regardless of the number of authors.

When organizations serve as authors, drop 'The' in an organizational name for the purposes of alphabetizing (unless 'The' is part of the official name of the organization), e.g. 'American Chemical Society', not 'The American Chemical Society'. When initials have been used for an organization as the in-text reference, order the reference by the full name, not the initials – so that in the list, [ACS] American Chemical Society precedes [ABU] Australian Biochemical Union.

If no authors are present, order items by title, following these principles: ignore 'a', 'an' and 'the' at the beginning of a title when alphabetizing. Order initials and acronyms in document titles as if they were words, not by the full name for which they stand. Order a title beginning with a number as if it were written out in words.

Date of publication

The year of publication is required for all references. The month and day of the month (or the season) must be included only when citing a journal that has no volume or issue number, when citing a newspaper or a patent, and for dates of update/revision and citation of electronic publications.

Months are abbreviated using the first three letters and placed after the year, e.g. 2016 Feb. A range of months is linked with an en dash, e.g. Aug–Oct. If no date of publication can be found, but can be reasonably inferred from within the publication, enclose it in square brackets, e.g. [2016]: If no date of publication can be found or inferred, use [date unknown].
